Diabetes is a very common and serious disease. New diabetes therapies and technologies are expanding dramatically and evidence-based guidelines are continually changing, making management more challenging. Keeping current with the latest therapies for the management of diabetes and related comorbidities is difficult and time consuming.

Primary care clinicians are increasingly responsible for diabetes management and education. This requires extensive knowledge of the natural history of diabetes and recommended treatment options, as well as the ability to teach people how to successfully manage their disease. Given the complex and diverse nature of diabetes, education on evidence-based practice guidelines and protocols is vital to a clinician's ability to effectively treat individuals with diabetes.

This program uses lectures and interactive learning activities based on the latest research and clinically proven therapies. With an emphasis on application, this comprehensive program for medical professionals includes practice-based case studies. This program will give clinicians increased knowledge, skills and confidence, and provide tools to manage this complex chronic disease.

## Program

### Day 1 (Thursday, Sept. 17)

- 7:30 am Registration and light breakfast
- 8:00 Welcome and announcements
- 8:15 **Diabetes Management Today**  
(Includes 15-minute pre-test on CMEcentral)
- 9:15 **CVD in Diabetes: Focus on HTN and Lipid Management**
- 10:15 Break and exhibits
- 10:45 **Trending Topics in Nutrition**
- 11:15 **Navigating the Maze of Noninsulin Therapies**
- 12:30 pm Lunch and exhibits
- 1:30 **Moving the Needle on Insulin Therapy**
- 2:30 **Glucose Pattern Management: Focus on Insulin**
- 3:30 Break and exhibits
- 4:00 **Diabetes and the Foot: Foot Exam, Neuropathy and Wound Care**
- 4:30 **Diabetes Management in Gestational Diabetes and Type 2 Diabetes in Pregnancy**
- 5:00 Adjourn

### Day 2 (Friday, Sept. 18)

- 7:45 am Light breakfast
- 8:00 **Optional CGM Wear and Learn Activity**
- 8:15 **Integrating CGM into Your Practice**
- 9:00 **CGM Case Study Workbook**
- 9:45 Refreshment break
- 10:00 **From Procedures to Pumps: Optimizing Diabetes Care in Real-World Situations**
- 11:15 **Modern Obesity Treatment: Mechanisms, Medications and Metabolic Surgery**
- 12:15 pm Lunch
- 12:45 **Type 2 Diabetes Prevention in Adolescents**
- 1:15 **Medical Nutrition Therapy for Diabetes**
- 2:15 **How Diabetes Affects Sexual Health**
- 3:00 Refreshment break
- 3:15 **Demystifying Diabetic Retinopathy**
- 3:45 Post-test
- 4:00 **Kidney Disease and Diabetes**
- 4:45 Adjourn

## Program objectives

Following this learning activity, participants will be able to:

- Discuss the underlying defects and natural history of diabetes
- Evaluate noninsulin diabetes therapies and identify principles for selecting, combining and advancing therapies
- Initiate insulin therapy based on individual assessment and adjust insulin doses based on blood glucose monitoring pattern management or continuous glucose monitoring (CGM) data
- Apply strategies to improve adherence to diabetes self-management activities such as lifestyle changes and glucose monitoring
- Outline a systematic approach for screening and managing the complications of diabetes: hypertension, dyslipidemia, renal disease, neuropathy, wound care, diabetes-related eye diseases, and sexual function
- Describe diabetes management in special populations such as pregnancy and the elderly
- Discuss evidence-based strategies to address obesity
